Enterprise AI Strategy & Advisory | PradimeAI.com

AI Strategy Consultant — Contract / Fractional

📍 Location: Remote considered-Chicago & Mid-West OR Dallas- DFW region preferred

🕒 Contract based | 1099 only,

Building Our Strategic Consultant Network

PradimeAI is building a curated bench of senior AI strategy practitioners ahead of upcoming client engagements. We are proactively identifying the right talent. If you are a senior AI and data leader who wants to do high-impact strategy work on your own terms, we want to meet you.

Strictly, no agencies please.

ABOUT PRADIMEAI

PradimeAI is a boutique enterprise AI strategy and advisory firm founded by a former Digital, Data and AI executive with 25+ years leading AI transformation, data platform engineering, and enterprise strategy across global financial services and regulated industries. We advise Fortune 500 C-suites and Boards on enterprise AI strategy, AI operating model design, data architecture transformation, and responsible AI governance-with the implementation depth to move clients from strategy to execution.

THE OPPORTUNITY

We are looking for senior AI Strategy Consultants who bring a rare combination: the strategic vision to advise Board and C-suite stakeholders on enterprise AI direction, and the deep implementation credibility to know what it actually takes to deliver. We work with enterprise clients on multi-year AI transformation programs — our consultants are expected to lead client engagements, not support them.

These are project-based, SOW-driven engagements with the expectation of ongoing relationship as our client portfolio grows. The right candidates will become a core part of PradimeAI's delivery capability.

WHAT YOU WILL DO

- Lead end to end enterprise AI strategy engagements with a depth of data architecture & readiness review, designing multi-year AI transformation roadmaps, prioritizing use cases by business impact, and defining the data, talent, governance, and platform investments required to execute
- Advise C-suite and Board stakeholders on GenAI, Agentic AI, and LLM strategy, including build vs. buy decisions, vendor evaluation, responsible AI guardrails, and ROI frameworks
- Conduct enterprise AI maturity and readiness assessments, benchmarking current-state capabilities and defining the sequenced capability-building agenda to close the gap
- Lead deep data architecture and data strategy reviews — assessing Systems of Record modernization needs, data governance maturity, and the infrastructure investments required to sustain AI at enterprise scale
- Design AI operating models and governance frameworks — including AI Center of Excellence structures, federated data ownership models, model risk controls, and regulatory-aligned deployment standards
- Bridge strategy and implementation — translating strategic recommendations into actionable architecture decisions, platform choices, and program delivery structures that engineering and data teams can execute against.

WHAT WE ARE LOOKING FOR

Experience & Background:

- 10–15+ years of enterprise AI, data, and technology leadership — spanning mid-level practitioners with deep implementation expertise through senior executives who have owned strategy and outcomes at scale; meaningful experience at a large regulated enterprise (not exclusively consulting) is strongly preferred
- Deep domain expertise in one or more of: large-scale banking or financial services, healthcare systems, or industrial / manufacturing enterprises — with firsthand knowledge of the regulatory, data, and operational complexity of those environments
- Proven track record leading AI strategy at enterprise scale — not just advising on it, but owning the outcome: defining the roadmap, aligning stakeholders, governing execution, and measuring business impact
- Hands-on data architecture and platform depth — you understand enterprise data engineering, Systems of Record modernization, cloud-native data platforms (AWS, Azure, GCP, Databricks, Snowflake), and what it takes to make data AI-ready at scale.

Technical & Strategic Fluency

- GenAI & LLM Strategy
- Enterprise Data Architecture
- AI Governance & Model Risk Compliance
- AI Operating Model Design
- Agentic AI Frameworks
- ML Platform & MLOps
- Cloud-Native Platforms
- Data Monetization Strategy
- NLU / Conversational AI
- Real-Time Data Engineering
- Responsible AI & Regulatory
- Board & C-Suite Advisory

The Intangibles

- You are equally comfortable in a Board room presenting AI strategy and, in a whiteboard, session debating data mesh vs. lake house architecture-credibility at both levels is non-negotiable
- You have pragmatic, implementable, data-driven recommendations about what good AI strategy looks like, and the communication skills to challenge client assumptions constructively while keeping the relationship intact
- You are energized by building a product line. PradimeAI is growing and we want consultants who see this as a platform, not just a project

ENGAGEMENT MODEL

Structure: Project-based SOW engagements; fractional retainer model available for ongoing advisory

Location: Chicago or Dallas metro preferred; remote considered for the right profile

Travel: Client-site presence expected for key engagements; typically, 30–40% depending on SOW

Commitment: Engagements typically range from 3–9 months; potential for multi-engagement relationship

APPLY

We review profiles on a rolling basis. To be considered for our founding consultant network, please apply and include a brief note on your domain focus and the type of AI strategy and implementation work where you add the most distinctive value.
